Raman Zana Khidhir

About Me

I am a Software Engineer and passionate about Website Development. I am a skilled Back-end Developer using Laravel framework and I have pretty good knowledge about cloud services such as AWS. And I am Experienced with Relational Databases such as MySQL, Aurora, MSSQL.

Work Experience

■ Software Engineer at Kurdistan24

July, 2020 - Present

- Responsible for web development including back-end development, front-end development, database design and administration, Working on AWS cloud, test development and deployment.
- Developed, installed and administered many functional, attractive, scalable web applications for kurdistan24 using Laravel Framework, Bootstrap, JS and other web technologies, such as Kurdistan24 Main website, K24 Research center website, K24 social website, ERP system, Attendance System and Kurdistan24 app's API.
- As an Active Member in Cloudflare team. I have participated in resolving website connectivity and security issues and improving performance using WAF and CDN cache.
- Worked with AWS cloud to configure, administering ec2-servers and managed to update web systems on those servers.
- Created and maintained MySQL Databases for kurdistan24 systems. Coded custom functions for database migration from old website(MS SQL) to new website(MySQL).
- Evaluated the impact of change requests and provided Management with estimates of the time and effort to implement the changes.
- Tested the code, tracked and fixed bugs as needed to ensure functionality at highest quality standards.
- Assisted/Mentored/Trained other team members as needed.

■ Freelance Web Developer with Various Clients

Feb, 2018 - July 2020

- Meeting with prospective customers to examine websites and gather client requirements for new or existing websites.
- Working closely with clients to establish problem specifications and system designs.
- Developing and maintaining web applications for a variety of clients, including websites, control panels, and APIs. Designed and implemented MySQL databases to support the web applications created.
- Wrote clean, efficient, and maintainable front and back end code for future development needs.
- Created website instructions to instruct clients on how to manage and edit website content step by step.
